

5 Horse Fixed Speed Cool Down Lead Walker

Economical

Priefert's "5-Horse Variable Speed Cool Down Lead Walker" is an economical version of our popular conditioning lead walkers and offers a variety of features and benefits not found on competitor walkers. Designed to be safe, durable, powerful, and low maintenance, Priefert Cool-Down Walkers are a perfect solution when cost is a factor. This walker was primarily designed for race tracks and other large operations where multiple walkers are needed.

Safe

When it comes to safety, Priefert walkers are second to none! All Priefert lead walkers feature emergency release handles on each arm so a horse may be freed quickly if they get into trouble. In addition, the control box features a manual emergency stop button. As an extra measure, should a balking horse stop the walker's forward motion repeatedly, the walker will automatically shut off; it may be reset at the control box. This feature not only prevents excessive wear on the motor but provides peace of mind to horse owners knowing if a horse falls, forward motion will be stopped.

Durable

All steel components used to make Priefert Walkers are high grade and processed in-house in our state of the art manufacturing facility. Motors, gearboxes and electronic controls are brand name and have to pass our engineer's rigorous tests before being used. Finally, each walker is powder-coated with an architectural grade of powder with UV inhibitors to give the product a fade resistant, "furniture-like" finish that will last for years to come. Quality inside and out is why Priefert Walkers are the most durable and maintenance free walkers on the market.

Convenient, Powerful & Low Maintenance

Each 5-Horse Variable Speed Cool Down Lead Walker comes with a wall mounted control box featuring a Siemens Drive, speed control buttons, forward/reverse buttons and an emergency stop button. This walker also features a Sumitomo 1/2 horsepower motor and most importantly a Sumitomo Cyclo® Drive gearbox (649:1 ratio) for efficient torque conversion and years of virtually maintenance free operation! In other words – **NO BELTS TO BURN!**

Quiet

Priefert Walkers are known for being "whisper quiet", outputting less than 60 decibels of noise. Imagine a product as large and powerful as this outputting less noise than a household dryer!

SPECIFICATIONS

5 Horse Variable Speed Cool Down Lead Walker	
Variable Speed	NO
Max Speed	3 MPH
Forward & Reverse	NO
